

Development of software for enterprises with Gnome

Juan José Sánchez Penas <jjsanchez@igalia.com>

Guadec 2006, Vilanova i la Geltrú

What do we mean by software for enterprises

ERP-like software (or a simpler version of it)

Wikipedia: Enterprise Resource Planning systems (ERPs) integrate (or attempt to integrate) all data and processes of an organization into a single unified system. A typical ERP system will use multiple components of computer software and hardware to achieve the integration. A key ingredient of most ERP systems is the use of a single, unified database to store data for the various system modules.

- Normally very database-oriented, sometimes they need complex architectures (three tier, distributed).
- Normally vertical (runs on top of the desktop and generic horizontal software) and quite specialized for each business or set of businesses.

Is this related to Gnome? (I)

- A nice definition of Gnome:
 - "GNOME is a community working towards one goal: making informatics useful to the user" Vincent Untz's blog
- Shouldn't this include the business users needing vertical data oriented applications for their daily work?
- How can Gnome as a project help that kind of users?

Is this related to Gnome? (II)

- Are there Gnome projects related to this?
 - Glom (www.glom.org)
 - Gazpacho (gazpacho.sizem.biz) / Kiwi (www.async.com.br/projects/kiwi) / Stoq
 - Fisterra (www.fisterra.org)
 - Tiny ERP (www.tinyerp.org)
 - Partially open solutions: pyGestor, ASPLFact
 - Other non free/published software developments
- They have different approaches but all of them try to make easier the development of business applications using Gnome technologies.
- They probably solve different and complementary business user needs, business better of software for enterprises with Gnome Guadec 2006, Vilanova i la Geltrú

Discussion

- Are the goals of all these projects different/compatible/reasonable/interesting?
- Should Gnome be used for those projects or other technologies are more interesting? J2EE,...
- Should Gnome do/support also the development of business applications? In which way?
- Should all the initiatives be grouped inside a
 Gnome subproject (Gnome Business
 Development Technologies) trying to get for
 example new interesting widgets inside Gnome,
 new tools, new marketing lines...

• ...

Action points

Sounds interesting? Then we could continue with:

- Mailing list?
- Wiki page?
- gnome.org section?
- Next meetings?

- ...
